### **NEW STUDY SUPPORTS LINK BETWEEN INEQUALITY AND CRIME**

Compelling new evidence of a link between inequality and crime in England invites reconsideration of the individualistic 'tough on crime' stances of recent New Labour and Conservative governments - according to an article in the latest issue of the journal *Social Policy and Society*.

The research by Dr Adam Whitworth from the Department of Geography at the University of Sheffield analyses Home Office 2002-2009 data for burglary, robbery, violence, vehicle crime and criminal damage at sub-national level across England against a range of factors including inequality, unemployment, residential turnover and educational achievement. After controlling for other factors the results suggest that inequality is significantly and positively associated with increased levels of all five crime types, with effects being larger for acquisitive crime and robust across various different measures of inequality.

Whitworth explained: "New Labour was criticised for continuing the previous Conservative government's individualisation of policy around ideas of personal responsibility, with social and economic context pushed down the agenda, and this is a trend that continues under the Coalition government. This encourages government to adopt a policy approach wedded to the assertion of greater control, protection of the socio-economic status quo and more intensive punishment of individuals at the risk of ignoring the structural inequalities within which outcomes need to be placed as well as

the harm done to the social order from (albeit legal) large-scale tax avoidance by wealthy individuals and organizations.”

He concluded: “In *The Spirit Level* (2009) Wilkinson and Pickett bring together the substantial and growing body of evidence about the harmful effects of inequality on different social outcomes. This harms all of us but particularly those who are least able to insulate themselves and their families from its negative consequences. The findings of this new research contribute further evidence of the harmful effects of inequality on social outcomes in terms of associations with increased levels of crime at sub-national level across England. We must have greater recognition in policy of the role of structural social and economic inequalities in relation to crime outcomes and a closer integration between social, economic and crime policies.”

‘Inequality and crime across England: a multilevel modelling approach’ appears in *Social Policy and Society*, vol. 11 issue 1 (January 2011). **About *Social Policy and Society***

*Social Policy and Society* is an international academic journal sponsored by the UK Social Policy Association and published by Cambridge University Press. The journal welcomes stimulating original articles that draw upon contemporary policy-related research and associated developments in the social sciences. Each issue contains peer reviewed articles reflecting topical debates and issues within social policy and uniquely, a themed section, edited by a Guest Editor(s). Every themed section includes an introductory piece, a set of peer reviewed articles, a selected review of the key literature, plus a guide to key sources in the area.
